

Information Security Management Training

5th and 6th April 2013, Nashera Hotel, Morogoro

Training Outline:

Information Security pertains to the confidentiality, integrity and availability of information. It's the means by which it is ensured that information security is realized. It has many aspects, including Security Policy, Organization, Risk Analysis, Risk Management, Business Continuity Planning and Disaster Recovery and Disaster Recovery, all of then related in one form or the other. The course will also cover privacy, relationship between security and privacy as well aspects ranging from logical to physical security. Other aspects include security issues pertaining to hardware, software and communications.

This course will focus on the information security management principles and how these help manage information security-related risks. We will formally define information security, identify key information security practices and principles and demonstrate how these are realized in organizations. Further, the training will present various security management models and discuss information security management in the context of the ISO 27000 standard.

The training will consist of the following topics:

• An Introduction to Information Security

Confidentiality, integrity and availability Information security process Information security organization Information security standards with emphasis on ISO 27000

• Information Security Risk Assessment

Concept of risk and risk assessment Information security risk: what it is and associated measures Information security assessment approaches and methodologies Information security risk assessment and standards

• Information Security Risk Management

Risk management concepts
Security risk management defined
Security risk management in practice
Information security management and standards
Information security risk management in practice

Workshop Objectives, Goals, and Expected Outcomes.

- To explain security challenges in the enterprise and discuss security management principles and approaches.
- Discuss existing approaches to security management and how these contribute to management of risk associated with information security.
- Provide insights into the role of standards in the management of information security in organizations.

Participants will have an appreciation of information security concepts, security management practices and how to apply standards in the management of risk associated with information security.

Workshop Rationale

Technology has become pervasive and with it come challenges of securing information; it is important that organizations ensure that they are in tune with the best practices that assure effective information security management.

Even in the face of the ever-changing technology landscape, there is an evolution of common practices on how to effectively manage associated information security-related risk. These standards when properly applied, offer assurance on the management of such risk.
